

tidal not as impressive as everything else

Capnography and common waves.

v/q status of lung

(90 degrees) assess re-breathing

3 alveolar plateau

anatomical dead space

2 anatomical & alveolar dead space

0 inspiration

12 common waves

Inspiration Expiration

Hyperventilation

Increased respiration

Decreased ETCO₂

Hypoventilation

Decreased respiration

Increased ETCO₂

Bronchospasm

Loss of α angle phase II and III
Increase of ETCO₂ baseline

Emphysema

Reversal of phase III (alveolar slope)

CPR

Decrease in ETCO₂ height due to low cardiac output / perfusion

ROSC

Rapid increase in ETCO₂ height

Apnea

Absence of phase 0, I, II, III

CO₂ Auto zero

Zeroing label in corner
Dotted line in interrupting graph tracing.

zeroing

Hypoperfusion

Steady decrease in ETCO₂ height

Tube displacement

Sudden loss or distortion in all phases or reduction of ETCO₂ height

Breathing over CMV

Short phase III (alveolar plateau) between mechanical ventilation

Curare cleft in mechanical ventilation

Indicating attempted inspiration of the patient and a weaning of sedation

Dip in phase III (alveolar slope)
